

Virtualization Administration Toolkit

Commercial Product ReadMe

A professional Python 3.12 and openpyxl workbook automation toolkit for Virtualization administration reporting, executive dashboards, capacity planning, backup tracking, snapshot governance, and infrastructure inventory documentation.

Included Modules

Module	Commercial Purpose
Cover Page	Premium branded workbook front page
Executive Dashboard	Power BI-style KPI and chart summary
VM Inventory	Enterprise VM documentation with 114 fields
Host Inventory	Host, license, health, and cluster tracking
Datastore	Capacity, free space, utilization, and warnings
Snapshot Tracker	Automatic age calculation and risk colors
Capacity Planner	Growth forecasts and recommendations
Backup Register	Backup compliance and restore-test tracking

Key Benefits

- Reduces manual Virtualization report-building effort.
- Creates a polished foundation for client-ready assessments.
- Centralizes inventory, backup, snapshot, and capacity views.
- Uses editable Excel output suitable for enterprise workflows.

Technical Requirements

- Python 3.12
- openpyxl
- Microsoft Excel or a compatible XLSX viewer

How to Run

- Create a Python virtual environment.
- Install dependencies with: `pip install -r requirements.txt`
- Run the Python workbook generator once orchestration is wired.

Commercial Use Notes

- Customize company branding, colors, sample data, and output paths before resale or client delivery.
- Validate formulas and workbook output against customer requirements before production use.
- Add licensing terms and support policy appropriate for your sales channel.
